DEPLOYMENT AND ACCEPTED RESULT

From Operating Condition to Outcome

CHALLENGE

Three Tuesday production records recurred across separate weeks, causing retained samples to disagree with their stated age. The product remained safe, but its paperwork could not establish which Tuesday had authorised it.

DEPLOYMENT

A passive HRO-12 feed aligned pasteurisation, inoculation and release records across three lines. Product age remained under the dairy's laboratory controls.

ITEM	FUNCTION	QUANTITY	STATUS
HRO-12	Reference authority	1	Accepted
LCI-3	Line chronology	3	Accepted
Batch records	Retained evidence	27	Accepted
Product ageing	Laboratory control	1	Excluded

RESULT

Every production line now reports the same Tuesday when Tuesday is in effect. Staff no longer choose among multiple locally valid versions of the day.

EVIDENCE BASIS AND VERIFICATION BOUNDARY

True Within the Agreed Boundary

INCLUDED IN OUTCOME	SEPARATELY GOVERNED
Pasteurisation records	Product ageing
Inoculation records	Unscheduled starter activity
Release documentation	Line 3 after local midnight
Three named production lines	Wednesday pending Quality acceptance

VERIFIED FINDING

No weekday variation remained among records designated Tuesday.

CONTROLLED DISCLOSURE

Line 3 continues to report Tuesday until the active batch consents to Wednesday.

Food safety controls remain independent.

IT IS STILL TUESDAY IN LINE 3
