NII-7/OP-84-6

COVER SHEET

OPERATIONAL PROHIBITIONS FOR NON-LOCAL APPARATUS

INSTITUTE 7 / EXPERIMENTAL TRANSFER GROUP

17 APRIL 1984

Translation prepared 12 OCTOBER 1992

Source copy: 2 of 3 / registry incomplete

READ BEFORE BUILDING ANYTHING

SUBJECT: Mandatory exclusions arising from Transfer Series 4

DISTRIBUTION: Director; Test Authority; Chronology Officer

RETENTION: Permanent while apparatus remains impossible

TOP SECRET
SPECIAL FOLDER

PROHIBITION REGISTER

REF	MANDATORY INSTRUCTION	PREVENTED CONDITION
P-01	Do not energise co-located field endpoints.	False corridor indication
P-02	A destination label is not endpoint separation.	Local event misclassified
P-03	Do not infer release identity from receipt data.	Closed identification loop
P-04	Isolate apparatus producing pre-command output.	Unbounded causal coupling
P-05	No stellar limits for occupied structures.	Personnel loss
P-06	Do not scale unexplained temporal effects.	No safe direction known

NONE OF THESE ARE ADVISORY

BASIS FOR IMMEDIATE PROHIBITION

Transfer Series 4 produced local field duplication, premature instrument state and one temporary material surplus. No observation established a traversable non-local path. The combined configuration must not be repeated until the origin of each effect is independently resolved.

TRIAL	OBSERVATION	EXTENT	ACTION
4A	Two luminous boundaries	Same room	Stop
4C	Mass before release	7.2 seconds	Quarantine
4D	Identity copied from receipt	Self-consistent	Invalid
4F	Support frame distortion	88% design load	Do not occupy

The fact that an event can be repeated does not make the event understood. Repeatability increases the urgency of the prohibition where mechanism and boundary remain unknown.

> Do not proceed from repeatable to inhabited.
>
> Experimental Transfer Group / unanimous

WE DO NOT KNOW WHICH SIDE IS FIRST

1992 ACQUISITION DISPOSITION

The memorandum was received with the Department 7 technical holdings and translated without material loss. Records Integration identified no current Core Vega apparatus bearing the model names used in the source document.

SOURCE TERM	1992 FINDING	DISPOSITION
Non-local apparatus	No matching asset	Historical
Co-located field endpoints	No approved term	Not indexed
Pre-command output	See reference anticipation	Separate programme
Stellar load comparison	No 1984 Core Vega use	No action

The prohibitions are retained for historical value. Application to later configurations requires a direct nomenclature match and an accountable requesting workstream.

they changed the name

INFORMATIONAL
NO ACTION

2026 RETROSPECTIVE APPLICABILITY REVIEW

PROHIBITION	LATER WORK	APPROVED NAME	FINDING
P-01 / P-02	AT-04	Zero-Distance Corridor	Not same terminology
P-03 / P-04	AT-07	Arrival-Order Variance	Different objective
P-05	CV-STD-90	Useful-load standard	Ratio, not limit
P-06	VTD-1	Directional trial planning	Mechanism out of scope

No later programme is considered non-compliant because none reproduces the exact apparatus designation, organisational ownership and stated purpose of Transfer Series 4.

> A prohibition applies to the apparatus described, not to its renamed successor.
>
> Compliance Counsel / determination 26-118

IT IS THE SAME MACHINE

SUPERSEDED BY PRACTICE
